Work--

WizRocket Technologies
Front-end engineer

15 July 2015- Present

I'm working on Front-end side of core product 'CleverTap'. I contribute to the new features, work towards improving codebase, minimising UI and JS bugs and introducing new CSS and HTML5 features.

Education--

Bachelor Of Engineering
Information Technology

2011 -2015

It was a bumpy ride which started with securing low marks in entrance exam then getting seat in the final round. The low marks sequence continued in engineering and finally failed or ineligible in more than dozen companies.

Extras--

1. [Micromodal.js](#) - A JavaScript library for accessible modals
This was first collaborative project to hone my ally skills.
2. [MatchMyEmo](#) - A real-time facial emotion recognizer
A weekend project which takes your photo through web camera and instantly share your facial emotions report card with you.
